INTERESTS

DESCRIPTION:

Built a serverless cloud-based resume hosted on AWS. The frontend is a static website served globally using CloudFront, while backend functionality such as a visitor counter is implemented using AWS Lambda and DynamoDB. Infrastructure is managed using Infrastructure as Code and deployments are automated using CI/CD.

KEY FEATURES:

- Static website hosting using Amazon S3
- Global content delivery using CloudFront
- Serverless backend using AWS Lambda and DynamoDB
- Infrastructure provisioning using Terraform
- Automated deployment using GitHub Actions
- Secure access using IAM least-privilege principles

CONTAINERIZED ROCK-PAPER-SCISSORS APPLICATION

TECH STACK:

DOCKER

PYTHON

YAML

GIT

GITHUB

DESCRIPTION:

Developed a Rock-Paper-Scissors game and containerized it using Docker to ensure consistent execution across environments. The application is packaged using a Dockerfile, making it portable and cloud-ready for deployment on container orchestration platforms.

KEY FEATURES:

- Application containerization using Docker
- Custom Dockerfile for packaging application and dependencies
- Consistent runtime environment across systems
- Portability for deployment on AWS ECS or Kubernetes
- Foundation for CI/CD-based container deployment
